

Thank you for joining Bulbird.com. If you registered with Bulbird.com as Admin, you have become a family member of Bulbird.com. As a family member, there are some rules and regulations to run the website smoothly.

1. All of us have a responsibility to respect each other's thoughts and ideas.
2. All admins are requested to use a unique code series for adding their product.
3. We deal in sanitary, electric, hardware, electronic, and fashion; if any admin wants any other branch, we consider it.
4. To add a category, select the branch first, and in the subcategory, select the category in which you want the subcategory.
5. All products, categories and subcategories are divided in branch and shown in relative branches.
6. To add a product, select the branch in which you want to add the product.
7. Please use categories or subcategories available to add products to the site if work is not running without making a new category or subcategory, then make a new one.
8. In product name special characters like (!, @, #, \$, %, ^, &, *, <, >) is not allowed.
9. All admins can make their assistant help with their work in the category of Data-Editor/Supervisor.
10. Data editors have the right to add products, edit product data, delete products, upload product files in a specified format, and upload images if products are uploaded by file.
11. Supervisor have Right to Supervise your Orders Update Delivery Status.
12. Admin can log in using the URL (<https://bulbird.com/admin/index.php>) by entering their user ID and login password.
13. Data Editor/Supervisor can use the URL to log in (<https://bulbird.com/admin/admin-user-login.php>) by entering their user ID and login password.
14. To matching product color you can use page giving on site with link <https://bulbird.com/colors.php> same name is added in color table to select.
15. Import/Export Product File Section is used to add/update products from the csv file. For doing this, first add some products on the website directly than
 - (a) download Import/Export Product File from given link
 - (b) In downloaded file You get format how fill data in file for product.
 - (c) In this file, you enter your product data as shown, data which is loaded directly. Only Prod id is not entered by you if any Prod id is already in the file; do not change or remove it. Use unique code series for adding product.

(d) After completing the file, save it. Upload the file from the given link; after uploading, download the same file from the site. Now you get the Prod ID.

(e) Now download Import/Export Attribute File from the given link. Enter your attribute data as shown. You can make many attributes for one product in this file. Attr code is equal to the prod id for which product has the attribute. In this file you cannot enter or remove attr id.

(f) Import/Export Attribute file is used to update product price and qty. To update price & qty first of all download file update price and qty in file and upload the file again by given link.

(g) If attribute image is used Product main image and attribute image0 of the first attribute will be the same, i.e., they will match exactly. If the color attribute is not used, you may upload up to four images in first attribute.

(h) If the color attribute is used, you may create multiple attributes, each associated with a specific color, size, and its corresponding images.

(i) If you want to attribute images, only the first attribute images are required. If you use a color attribute, each attribute's images are required.

(j) Upload product main image & upload product attribute image links are used to upload product images and their attribute images.

(k) in CSV files, the product file (pro img) URL is like (productimages/your code- your image name as saved in file.png) and in the attribute file (attr image?) URL is like (attrimages/your code- your image name as saved in file.jpeg).

(l) The image should be a minimum of 800x800px and a maximum of 1200x1200px; the format is PNG, JPEG, WEBP or WBMP.

(j) If you want to deal in wholesale, then fill in the wholesale quantity & wholesale price attributes.

16. Google product category is compulsory to approve products in Google Ads.

17. For fashion product size, color, cloth material is compulsory.

18. Extension of membership is a one-month period; you can extend membership so many times in one slot.

19. Membership extension is required one week before; else your product will disappear from the site and no order will be received.

20. After 45 days of membership expiry, all products are deleted from the site and are not recoverable.

21. If by fault, Admin is not extending his membership. If the admin wants, he can extend his membership in the next 45 days before product deletion with a penalty. For doing so please visit URL <https://bulbird.com/admin/admin-register.php>

22. Membership is free for One Month for trail after that costing for a month is Rs4000 tax include. In this amount, we advertise for your products.

23. You will be charged 5% of your sale amount for payment gateway expenses and other maintenance charges tax include.
24. All products include transport charge and other extra charges as you like.
25. All admin is advised to make a packaging video from start to end uninterrupted and load the same on the website from the given link.
26. A strategy for information is compulsory on packing that, if outer packaging appears to be damaged, please don't take delivery. Before opening the package, make a video of the unpacking process.
27. Transportation is at your site; we do not provide any courier service.
28. Product descriptions and specifications are added by using HTML tags to decorate text.

28.1. Some Commonly Used HTML Tags Include:

`<b>`which displays boldfaced text`</b>`

`<br>` which enters a line break into paragraphs

`<h1>`, `<h2>`, `<h3>` to `<h6>`display headings`</h1>`

`<hr>`which inserts a horizontal line

`<p>`which introduces a paragraph`</p>`

28.2. Uses of HTML Tags

28.2.1 Headings

Headings are important to use in your document. They give it some structure. HTML allows you to have six different headings: `<h1>`, `<h2>`, `<h3>`, `<h4>`, `<h5>` and `<h6>`.

Headings follow the following syntax:

`<h1>`The texts for Heading 1 go here`</h1>`

`<h2>`The texts for Heading 2 go here`</h2>`

`<h3>`The texts for Heading 3 go here`</h3>`

`<h4>` The texts for Heading 4 go here`</h4>`

`<h5>` The texts for Heading 5 go here`</h5>`

`<h6>`The texts for Heading 6 go here`</h6>`

You can use headings according to importance. For instance, you can use `<h1>` for your most important headings and `<h2>` to `<h6>` for your less important ones.

You can also use headings to group and organize your content so that `<h1>` becomes your main section headings, while `<h2>` will introduce a subsection within your main section and `<h3>` will introduce further subsections within your

<h2> subsection. If your page includes a title, you might want to use <h1> for the title, and <h2> for the main sections, and through <h3> for subsections.

28.2.2 Paragraphs

When working with HTML documents, you would need to use the paragraph tag <p> in order to insert white space between two paragraphs.

You can use the following syntax when writing a paragraph for your HTML document: <p>Paragraph 1 starts here</p>.

28.2.3 Unnumbered, Numbered, Definition and Nested Lists

There are two most common lists used in HTML and these are:

- Ordered list.
- Unordered list.

28.2.3.1 Ordered Lists

You use ordered lists if the sequence of your items is important. Ordered lists enumerate the various items on your list on separate lines. It will have less space in between items, unlike when you use or paragraph tags. Lastly, ordered lists are typically indented. The usual syntax for ordered lists is as follows:

```
<ol>
```

```
<li>This is the first item on the list. </li>
```

```
<li>This is the second item on the list. </li>
```

```
<li>This is the third item on the list. </li>
```

```
</ol>
```

This will be displayed as:

1. This is the first item on the list.
2. This is the second item on the list.
3. This is the third item on the list.

Attributes that you can use with ordered lists

As with other tags, you can change how ordered lists look by adding attributes. Two of the most used attributes are type and start.

1. Type

Instead of numbers, you can also have letters and Roman numerals. Types and their

corresponding syntax are as follows:

```
<ol type="a"> will display a, b, c
```

`<ol type="A">` will display A, B, C

`<ol type="i">` will display i, ii, iii

`<ol type="I">` will display I, II, III

28.2.3.2 Unordered Lists

Unordered lists are also called bulleted lists and, unlike ordered lists, the sequence of items is not important in this type of list.

Similar to ordered lists, each item in your list is presented on separate lines, introduced by a bullet. Unordered lists are also indented.

You can create an unordered list by using the following syntax:

`<ul>`

`<li>This is item #1.</li>`

`<li>This is item #2.</li>`

`<li>This is item #3.</li>`

`</ul>`

This will display as:

- This is item #1.
- This is item #2.
- This is item #3.

29. use no space in html writing for example if we write

`<h1>Specification</h1><ul><li>This is item #1.</li><li>This is item #2.</li><li>This is item #3.</li></ul>`

This will display as:

Specification

- This is item #1.
- This is item #2.
- This is item #3.

30. Managing Attributes and Categories

30.1 You are allowed to add the following details to your products:

1. Color
2. Size
3. Category
4. Subcategory

31. However, to edit or delete any of these after creation, you must contact the website administrator.

32. Category Selection Requirement

1. The platform currently supports five main product categories: Hardware, Sanitary, Electrical, Electronics, and Fashion.
2. All products must be listed in the correct category based on their type.

For example, a product related to electrical items must be listed under the Electrical category.
